THE BUBTAINER ACTUATOR ABBENBLY FAILED DURING MANUFACTURING TEBTING DUE TO LEARAGE OF H<br>Toraulic fluid from the bleed fort. This was caused by a poor finism of the bleeder valve sealing burface.                                                                                                                                         | T FAILED DURING MAIN.<br>OR FINION OF THE BLI                        | FACTURING<br>EDER VALVE | 7E871M6 D<br>: 8EALIM6               | UE TO      | . FAILURE MODE-OUT OF SPECIFICATION. THE VE ACTUATOR ASSEMBLY FAILED WHEN THE DIFFERENTIAL FEEDBACK VOLTAGE WITH THE EMGINE ACTUATED TO EXTREME TAW POSITIONS MEASURED 0.74 VOLT AS OPPOSE) TO A MAX. ALLOMABLE D.6 VOLT. THE FAILURE WAS OUT TO A MULL VOLTAGE SHIFT MAICH RESULTED FROM A PHYSICAL JAR TO THE FEEDBACK FRANSDUCER PROSE SHACKET. EXISTING D INCHSIONS OF THE SRACKET HOUNTING MOLES AND SECURING SCREWS ALLOW FOR COMBIDERABLE SLOP WHICH COULD PERMIT EXCESSIVE MULL SHIFT.

ATTRIBUTED TO RESIN DEPLETION AT INITIAL PARTICATION, UMER CURING AND AGEING. THE C'AC'S HAD BEEN PATCHED-WITHOUT AUT MOSTALISM. RESIN CONTENT WAS APPROXIMATELY HALF THAT REQUIRED BY DRAWING, BY PERCENT. THIS REDUCED FLEXUME STAENGTH TO 6143 PSI. REQUIREMENT IS FOR 10,000 PSI. BEYENLY CONTOUNED AREAS AFFECT MESIN CONTENT.

CONACCIIVE ACTION-IT WAS RECOMMENDED TO REPLACE ALL PAININGS MAVING UNAVINGAIZED PATCHING. DESIGN PERBONNEL ESTABLI Daed a manufactoring descritcation for repair of abbestob resin structure.
